# FOUNDERS

# ROUND

---

**IEBC is developing a decentralized platform for Engineering, Finance, and Insurance protocols. These three forces acting together are responsible for nearly all value upon which society depends.**

Daniel Robles, PE  
CEO, Integrated Engineering Blockchain Consortium

---

**Outlining the Integrated Engineering Blockchain Consortium initiatives, goals, objectives, and membership benefits.**

November 30, 2018 • Seattle, WA, USA

# SUMMARY

---

The IEBC Founders Round is the go-to-market initiative of the Integrated Engineering Blockchain Consortium. The objective is to reduce systemic risk in economic systems by development of a collaborative interface between Engineering, Financial, and Insurance Institutions. The Founders seek to bring together a limited number of visionary organizations to help pave the way to the future and define this important new protocol.

The IEBC has developed CoEngineers.io, a native proof-of-stake blockchain specifically designed as a validation platform and decentralized body of knowledge repository for engineers, actuarial scientists, and quantitative analysts, allowing them to work closely to identify, quantify, assess, and mitigate systemic risk exposures.

The CoEngineers.io blockchain provides a distributed, time-based, immutable, irreversible, database to register and analyze valid engineering information related to the physical state of the world. Uniform definition of tangible assets will increase the accuracy and efficiency of essential business decisions related to project delivery in energy, infrastructure, environmental, and natural resource allocation.

The result will be enhanced project finance, insurability, maintainability, and adaptation of new digital technologies.

Core research includes best practices for blockchain integration, risk mitigation, and the anthropology of cryptographic tokens as a value marker, and means to introduce targeted incentives that motivate productive behaviors while reducing moral hazard among stakeholders.

**REDUCING  
SYSTEMIC RISK  
USING THE POWER  
OF BLOCKCHAIN**

## THE FOUNDERS ROUND

The Founders Round will close when five million dollars has been raised. Inaugural members will enjoy co-founder status and favorable access to IEBC research and experience applying blockchain technology to use cases involving knowledge asset liquidity, obsolescence insurance, and engineering validation at points of risk transfer as applied to global project delivery systems.

# GOALS AND OBJECTIVES

---

Accelerate the development, deployment, and test of the existing CoEngineers.io blockchain (currently in Alpha Release)

Collaboration among diverse partners in the development of the IEBC Innovation Bank™ - The Innovation hyper-engine of the future.

To provide a comprehensive online forum for collaboration with consortia members, cross- industry leaders, and expert facilitators.

To disseminate prior research and current use cases by IEBC thought leaders. To introduce co-publishing opportunities with industry experts and blockchain pioneers.

To develop and test research on emergent topics in crypto-economics, production, and detailed specifications on how to operate a native blockchain community for your own organization.

# MEMBERSHIP BENEFITS

**Early access to early stages of digital transformation and business opportunities before changes in cost to access and engagement increases.**

- Immediate access to blockchain developers and early involvement with a technology system that will disrupt every industry.
- First access to new data discoveries and use cases unique to the engineering and innovation industries. Collaboratively develop a new, unique interface that will allow consortia member to engage their consumers directly and securely. This will allow members to develop methods of data access according to individual industry needs.
- Avoid the staffing cost, learning curve, and development risk of in-house blockchain initiatives while still gaining direct experience in Blockchain ecosystems for engineering.

**Beat the inevitable “Commoditization of Engineering” by learning how to adapt traditional hierarchy to a networked platform.**

- Align your business with blockchain technology alleviating chances of unfavorable disruption.
- Lead the industry on best possible uses of blockchain while increasing network value through integrated business models.

**Discover knowledge-asset liquidity, novel insurance products, advanced financial instruments, and much more.**
